

Certificate

Fire protection rating for
BLANCO COOK,
model series BC I-flex 1, BC I-flex 2 and BC I-flex 3,
especially under extreme conditions of use.

Customer:
BLANCO Professional GmbH + Co KG, Flehinger Str. 59,
75038 Oberderdingen

The units previously provided to me for fire protection rating and the new unit types,

BLANCO COOK BC I-flex 1, BC I-flex 2 and BC I-flex 3

by BLANCO Professional GmbH + Co KG, Flehinger Str. 59, 75038 Oberderdingen, are suitable for their intended use without any special restrictions, including within railway and airport buildings.

Based on the components used and known to me, this unit as a whole as can be considered

non-flammable or not flammable on its own

The unit as a whole does not pose any risks, it does not allow fire to spread and no malfunctions occur of any kind, even under extreme fire loads. The flame protection filters used in accordance with Class A (aerosol separator, flame-arresting as specified in DIN 18869-5) fully absorb flames and most of the resulting heat. The user is required to operate the unit properly and must not store excessive fire loads or oxidising substances close to the unit. Exits and escape routes must remain unobstructed at all times.

The units BC I-flex 1, I-flex 2 and I-flex 3 can be used without additional fire safety equipment.
